ADF stands for Application Design Framework. It is an autocad macro language that enables you to write your own commands for use with the other autocad languages. People at Autodesk created the first autocad. It was called autocad80, which was released in 1980. This autocad was used mainly by architects and engineers who did lots of drafting. Starting with Autocad 2000, Autodesk introduced some new objects and functions. The main things were: support for architectural blueprints, a 3D drawing capability, improved printing functionality and new tools and features. Source: Wikipedia Autocad History Autodesk is a software company that has an eye on the future. In the past they have been mostly known for designing a range of CAD and architectural software. They make their money selling that software and also from consultancy work, training and other products and services. The first iteration of their autocad software started in 1982. It is still used by professionals to this day. The name of the first version was autocad80. The autocad software was a complete revamp, compared to the previous version. This was done because the previous version was not very user friendly. During the 1980s and 90s, users bought only autocad software. It was only the people that were working in the various sectors, such as the building and construction sectors, that needed such software. However, as the market expanded, other companies started to make other types of software. So, in order to remain competitive, Autodesk introduced the first version of the autocad software to the market. It was as good a software application as the other one and was usually bought at a price that was more affordable. This software made autocad affordable and accessible. The company had to start looking for ways of increasing revenue. So, they came up with the first version of Autocad. There was no internet at that time. So, they needed to market their product by putting it on the bulletin board. And because of that, people started using it. This was around the time that the internet started developing. So, the company started using the internet to market their product. In the first version of aut

I have added photos from my recent visit to the Empire State Building. The Empire State Building is also a “must do” on a visit to New York. This iconic architectural wonder can be found in Rockefeller Plaza. The building was opened on May 1st, 1931 and stands at 1,454 ft tall. The white and gray building’s observation deck stands at 1,250 ft high. This is the largest observation deck in the world. In addition to the observation deck there is an elevator that will take you to the top. The Empire State Building has become an icon in New York City. I would recommend a visit there during the day to see this iconic architectural wonder. If you are there during the day, don’t forget to take a photo with the building. The Empire State Building is the tallest building in the U.S.A and the world. Its location is symbolic of the rise of the city. The Empire State Building has a variety of gift certificates that you can purchase. These gift certificates are available from the Empire State Building at 1-800-8EASTBOUND and www.esbnyc.com.
