Mango Privacy is a newly released malicious application that has already managed to fool unsuspecting users to install it on their computers. The malicious application is trying to get close to the users' sensitive data and steal it. It uses three different methods to infiltrate the computers that it infects. • Registry modification • Installation of additional programs • Direct modification of the file system It does not affect the way Windows work or stop the computers from working properly in any way. However, it can cause the users a lot of problems as it tries to steal the personal information from their computers, and it can slow down the Internet connection. The malicious application is bundled with the untrusted files like the file named "1336535938.lnk". If you have been fooled to install this file, you need to delete it from your computer immediately, and you need to delete Mango Privacy from your browsers' extension and plugins. Furthermore, you can clean your computer from this malware using the steps mentioned in the removal guide below. The malicious application does not have an uninstaller to get rid of it. If you are trying to remove this dangerous application manually, then you should keep following the steps included in the removal guide below. Important: If you are using Windows Vista, Windows 7, or Windows 8, then you should avoid using IE as it can allow the malicious application to implant itself on your computer. Besides, you should also avoid using Firefox and Chrome because they can also allow the dangerous application to get installed. The best option is to use Microsoft Edge. How to remove Mango Privacy from your PC NOTE: If you want to eliminate the malicious application automatically, then you should download the SpyHunter malware removal tool. To do so, click the button below. NOTE: The steps mentioned in this guide were tested on our own PC. However, we cannot guarantee that they will work on your computer. The steps included below can be used to remove the malicious application from your computer. What's New In Pocket RDS?

Fully rewritten since the last version, Pocket RDS 3 brings a new user interface with a cleaner graphical design and a better user experience. As for the old version, it remained very stable and reliable. Additionally, the application was translated into a variety of languages. What's new in Pocket RDS 3: Completely redone user interface that is more intuitive and clean The application now has a cleaner graphical design, meaning that the entire interface is completely redesigned. Not only that, but the application is now translated in various languages. What's more, you can now define your own "email" instead of sending a message to a static one. Fully compatible with Windows 7 and Windows 8 Pocket RDS 3 remains compatible with the previous version, therefore it is possible to use it without any difficulty. You can choose between Windows 7 or Windows 8 so that you can access it from each of the mentioned operating systems. Can also create up to 100 simultaneous server sessions The application has an option that allows you to create a maximum of 100 simultaneous server sessions. This means that you can keep running remote assistance sessions for a considerable amount of time. Also, no login sessions are required, which means that you can store your credentials and avoid entering them each time you launch the application. Installation: Download and install the .exe file Optionally, launch it from the Start menu by simply clicking on its icon Your computer will reboot automatically Note that the portable version of Pocket RDS requires you to install .NET Framework. However, the application will automatically detect if this is the case and install the required files accordingly. You can customize the application so that it presents the list of languages you want to use on the server screen. Manually launch the application or start it automatically upon Windows startup Pocket RDS allows you to easily create and launch the application manually or launch it automatically when you boot your computer. To do so, you need to select the computer that will be used as your server and click the "Add" button. Finally, choose your desired language and connect to the remote desktop that you have set in order to create a remote desktop assistance server. Pocket RDS Themes: With the available options, you can choose between the list, tile, small icon, large icon or detailed modes. Main features: - Fully rewrite the application since the last version - Easily create a remote desktop assistance server from the selected computer - Ability to create up
